

Software Testing Report

Vendor & Restaurant Website - Functional, API, and Frontend Testing Report

Report Information

Project Name	Vendor & Restaurant Website
Report Date	Thursday, August 13, 2026
Module Scope	Vendor & Restaurant Profile Management, Review and Rating Management
Test Type	Functional Testing, API Testing, Frontend/UI Testing
Test Environment	Staging / QA Environment
Overall Test Outcome	Passed

1. Vendor & Restaurant Profile Management

API and Frontend Function Tests

Test ID	Feature	Description	Expected result	Actual Result	Status
VPM-API-001	API - Vendor Registration	Submit valid vendor profile data using POST /api/v1/vendors	Vendor record is created successfully and API returns HTTP 201 with vendor ID	API returned HTTP 201, vendor ID was generated, and vendor data was saved correctly	Pass
VPM-API-002	API - Retrieve Vendor Profile	Fetch vendor details using GET /api/v1/vendors/{vendorId}	API returns HTTP 200 with correct vendor profile data	API returned HTTP 200 and vendor details matched the stored record	Pass
VPM-API-003	API - Update Vendor Profile	Update vendor contact details using PATCH /api/v1/vendors/{vendorId}	Vendor details are updated successfully and API returns HTTP 200	API returned HTTP 200 and updated vendor details were visible in subsequent fetch request	Pass
VPM-API-004	API - Duplicate Vendor Validation	Attempt to create a vendor profile using an already registered email or business identifier	API should reject the request and return a duplicate validation error	API returned HTTP 409 with a clear duplicate record error message	Pass
VPM-API-005	API - Create Restaurant Profile	Create a restaurant under a vendor using POST /api/v1/vendors/{vendorId}/restaurants	Restaurant record is created and linked to the correct vendor	API returned HTTP 201 and restaurant was correctly associated with the vendor	Pass
VPM-API-006	API - Update Restaurant Profile	Update restaurant name, address, cuisine type, contact number, and status using PUT /api/v1/restaurants/{restaurantId}	Restaurant profile is updated successfully and changes are saved	API returned HTTP 200 and updated restaurant details were reflected in the database and UI	Pass
VPM-API-007	API - Upload Restaurant Logo/ Banner	Upload restaurant logo or banner image using POST /api/v1/restaurants/{restaurantId}/media	Image is uploaded successfully and media URL is returned	API returned HTTP 200, media URL was generated, and image appeared on restaurant profile	Pass
VPM-API-008	API - Invalid Profile Payload	Submit missing or invalid required fields while creating/ updating vendor or restaurant profile	API should return validation errors and should not save invalid data	API returned HTTP 400 with field-level validation messages	Pass
VPM-API-009	API - Authorization Check	Attempt to update another vendor's profile using an unauthorized user token	API should deny access and return HTTP 403	API returned HTTP 403 and no profile data was modified	Pass
VPM-FE-001	Frontend - Vendor Registration Form	Enter vendor details and submit the registration form	Form validates required fields and redirects user to vendor dashboard after successful submission	Form validation worked correctly and user was redirected to dashboard after successful registration	Pass
VPM-FE-002	Frontend - Restaurant Profile Edit	Edit restaurant name, address, contact details, cuisine type, and operating status from restaurant settings screen	Updated restaurant details are saved and displayed on restaurant profile page	Changes were saved successfully and displayed correctly after page refresh	Pass
VPM-FE-003	Frontend - Required Field Validation	Leave mandatory fields blank and attempt to save vendor or restaurant profile	System should prevent submission and display inline validation errors	Inline validation errors were displayed and form submission was blocked	Pass

Test ID	Feature	Description	Expected result	Actual Result	Status
VPM-FE-004	Frontend - Logo/ Banner Upload Preview	Upload restaurant logo/banner and verify preview before saving	Image preview is displayed before saving and image is saved successfully	Image preview appeared correctly and uploaded image was retained after saving	Pass
VPM-FE-005	Frontend - Restaurant Status Toggle	Toggle restaurant status between Active and Inactive	Restaurant status updates immediately and reflects in restaurant listing	Status changed successfully and was displayed correctly in listing page	Pass

2. Review and Rating Management

API and Frontend Function Tests

Test ID	Feature	Description	Expected result	Actual Result	Status
RRM-API-001	API - Create Review	Submit a review with rating and comment using POST /api/v1/restaurants/{restaurantId}/reviews	Review is created successfully and API returns HTTP 201	API returned HTTP 201 and review was visible in the review list	Pass
RRM-API-002	API - Rating Range Validation	Submit a rating value below 1 or above 5	API should reject invalid rating and return validation error	API returned HTTP 400 with message indicating rating must be between 1 and 5	Pass
RRM-API-003	API - Retrieve Reviews	Fetch restaurant reviews using GET /api/v1/restaurants/{restaurantId}/reviews with pagination and sorting	API returns review list with correct pagination metadata	API returned HTTP 200 with expected reviews, sorting, and pagination data	Pass
RRM-API-004	API - Update Own Review	Author updates their review using PATCH /api/v1/reviews/{reviewId}	Updated review is saved and API returns HTTP 200	API returned HTTP 200 and updated review content was saved correctly	Pass
RRM-API-005	API - Delete Own Review	Author deletes their review using DELETE /api/v1/reviews/{reviewId}	Review is removed successfully and API returns HTTP 204	API returned HTTP 204 and review was no longer available in review list	Pass
RRM-API-006	API - Prevent Duplicate Review	Same user attempts to submit multiple reviews for the same restaurant	System should prevent duplicate review creation	API returned HTTP 409 and duplicate review was not created	Pass
RRM-API-007	API - Average Rating Recalculation	Create and delete reviews, then verify restaurant average rating and total review count	Average rating and review count update correctly	Average rating and total count were recalculated correctly after review creation and deletion	Pass
RRM-API-008	API - Report Review	Submit a review report using POST /api/v1/reviews/{reviewId}/report	Report is logged successfully for moderation	API returned HTTP 201 and reported review appeared in moderation/report queue	Pass
RRM-API-009	API - Vendor Reply to Review	Vendor submits reply to a customer review using POST /api/v1/reviews/{reviewId}/reply	Reply is saved and associated with the correct review	API returned HTTP 201 and reply was displayed under the related review	Pass
RRM-FE-001	Frontend - Submit Review	User selects star rating, writes comment, and submits review	Review is submitted successfully and appears in review section	Review was submitted successfully and displayed in review list	Pass
RRM-FE-002	Frontend - Star Rating Interaction	Click and select rating stars in review form	Selected stars are highlighted and correct rating value is captured	Star selection worked correctly and selected rating was submitted as expected	Pass
RRM-FE-003	Frontend - Average Rating Display	Open restaurant profile page and verify average rating and review count	Average rating and total reviews are displayed correctly	Average rating and review count matched API response	Pass
RRM-FE-004	Frontend - Sort Reviews	Sort reviews by newest, highest rating, or lowest rating	Review list updates according to selected sort option	Sorting worked correctly and review order updated as expected	Pass

Test ID	Feature	Description	Expected result	Actual Result	Status
RRM-FE-005	Frontend - Edit/ Delete Own Review	Author edits or deletes their review from the frontend	Edit/delete actions are completed successfully and UI updates accordingly	Edit and delete actions worked correctly and UI state updated after action completion	Pass
RRM-FE-006	Frontend - Vendor Reply UI	Vendor replies to a customer review from the review management screen	Reply is saved and displayed under the relevant review	Vendor reply was submitted successfully and displayed correctly below the review	Pass

Test Summary

Total Test Cases Executed	30
Vendor & Restaurant Profile Management Tests	15
Review and Rating Management Tests	15
Passed Test Cases	30
Failed Test Cases	0
Blocked Test Cases	0
Not Executed Test Cases	0
Overall Pass Rate	100%

Overall Observations

- All core API endpoints related to vendor and restaurant profile management were tested and responded as expected.
- Frontend profile creation, editing, validation, image upload, and status management functions worked correctly.
- Review creation, editing, deletion, rating validation, moderation reporting, and vendor reply functionality were validated successfully.
- Average rating calculation and review count updates were consistent with review activity.
- Authorization checks prevented unauthorized users from modifying vendor or restaurant profile data.
- No critical defects were identified during this testing cycle.

Known Limitations

#	Known Limitation	Impact / Notes
1	Review image or video upload is not included in the current scope	Users can submit text reviews and ratings only
2	Real-time review updates are not available	Newly submitted reviews may require page refresh to appear
3	Bulk import of restaurant profiles is not supported	Restaurant profiles must be created individually
4	Restaurant media upload supports logo/banner only	Additional gallery image management is not included in this release
5	Vendor profile audit history is not available in frontend	Profile changes are saved, but change history is not displayed to users
6	Review moderation is limited to manual review/report handling	Automated spam or abusive content detection is not implemented
7	Average rating may be cached on public pages	Rating updates may require cache refresh or short delay to reflect publicly
8	Testing focused on modern browsers	Older browser versions were not included in compatibility testing
9	API performance/load testing was not included in this cycle	Functional correctness was validated, but high-load behavior has not been fully assessed
10	Multi-language review validation was not fully tested	Reviews containing non-English characters were accepted, but language-specific validation rules were not verified
